## MAGNETOSTRICTIVE

Measuring length absolute up to 3 m linear position transducer

### PRODUCT DESCRIPTION

MAG100 is a magnetostrictive position transducer designed for use with hydraulic cylinders in mobile application. Its unique design, plus a wide range of cursor configurations, ensures easy installation and total compatibility with cylinder manufacturer specifications.

Working temperature from -40 to +85°C, working pressures up to 350 bars, high resistance to vibration and shock give the sensor the indispensable strength needed for heavy-duty use. High performance in terms of transduction of measurement defined as linearity, hysteresis and repeatability. The signal is Analog output.

### OPERATING PRINCIPLE

The magnetostrictive effect on metallic wire or rod creates a change in length or volume of the wire or rod in the presence of a magnetic field. Ferromagnetic metals can have negative or positive magnetostrictive properties, for example they can shrink or stretch which in turn decreases or increases its volume. This effect is used in our magnetostrictive linear position sensors.
